Write a program to build a simple Student Management System using Python which can perform following operations: Accept Display Search Delete Update Approach: Below is the approach to do the above operations: Accept – This method takes details from the user like name, roll number, and marks for two different subjects.

### ~~Student management system in Python — GeeksforGeeks~~

Both the independent and the dependent Student's t-tests are available in Python via the `ttest_ind ()` and `ttest_rel ()` SciPy functions respectively. Note: I recommend using these SciPy functions to calculate the Student's t-test for your applications, if they are suitable. The library implementations will be faster and less prone to bugs.
