A fundamental lesson

learned in the

management of acute

(and chronic) pain is

that even when the

obvious, peripheral

source of pain is gone,

the underlying nervous

system may not have

healed, i.e., recovered

Online Library

Acute Pain

from sensitization.

Thus, we need to participate in extended analgesic planning for our patients.

Pain can be divided into acute and chronic types. This article will predominantly focus on

Online Library

Acute Pain

the assessment and management of acute pain. Clinical Assessment of Pain.

Post-operative pain can be assessed subjectively and objectively:

Subjective □ Ask the patient to grade their pain on a scale of mild, moderate or severe. This can be assessed regularly as part of the nursing observations.
