There are no medicines to prevent the progression from wheeze to asthma, or ways to predict who will prevent lung damage later in life. Previous studies have shown strong associations between a particular area of DNA, including two particular genes - called ORMDL3 and GSDMB - and people who wheeze in early life and go on to develop asthma.

cause: Understanding the underlying biology of asthma(2)(2)

Asthma is known as a chronic inflammatory disease and affects the airways. There are a number of ways in which people can contract asthma. It can be genetic, so passed on from the parents to their offspring.
