Response Fruit Flies

Choice

In an investigation of fruit-fly behavior, a covered choice chamber is used to test whether the spatial distribution of flies is affected by the presence of a substance placed at one end of the chamber. To test the flies' preference for

more than two choices.

Adult fruit flies are
attracted to substances
that offer food or an
environment in which to

File Type PDF

Biology

lay eggs and develop larvae. Typically those environments are rotting or fermenting fruit.

Adult fruit flies are attracted to bright light, and their larvae move away from bright light. Adult fruit flies also demonstrate a negative geotaxis; they climb up in their chambers or vials against gravity.
