The car was available on the left-hand drive continental markets from its launch on 2 October 1986, as a three-door hatchback with 1.0, 1.1 and 1.4-litre TU-series belt driven OHC engines. A range of five-door models was added in 1987 and a 1.4 litre diesel engine was introduced in 1988.

Citroën AX - Wikipedia

In 1989 a naturally aspirated diesel AX, using the 1360 cc all aluminium alloy TUD engine, managed a figure of 2.7 litres per 100 kilometres (100 mpg-imp; 87 mpg-US), totalling over 1,000 miles (1,609 km) from Dover to Barcelona. This was the longest ever distance travelled on 10 imp gal (45.5 L; 12.0 US gal) of fuel and earned it a place in the Guinness Book of Records as the most economical production car.

Citroen - Citroen AX (1986-1998) - Motor Car

The model range has included 1.0-litre, 1.1 and 1.4-litre petrol engines as well as a 1.4-litre diesel (upgraded to 1.5-litres in May 1994). Of these, the diesels were particularly popular, mainly because independent tests consistently found them to be the most economical small cars it was possible to buy.

Engines were low-friction 1.0-litre, 1.1 and 1.4 TU OHC engines from the Peugeot-Citroen stable while fully independent suspension was novel for the class, so the AX ensured Citroen's reputation ...

Citroen's AX factor - Independent.ie

The PSA TU engine is a family of small four-cylinder engines used in the Peugeot and Citroën range of cars. It was introduced in 1986 with the Citroën AX, replacing the X family, although it shared many components with its predecessor. The TU is available in either petrol or a naturally aspirated diesel variant, the latter called TUD. The TU engine is distantly related to the older X-Type engine - sharing a similar overhead camshaft architecture, but the key differences are the belt driven ...

The issue of 'sustainability' in the developed world is nowhere more critical than in the field of personal travel, which in many countries has become the fastest-growing contributor to global warming. Unless the use of cars can be brought under control, there is little chance of meeting government targets for reducing greenhouse emissions. Personal Transport and the Greenhouse Effect sets out the steps that could be taken to lessen the conflict between personal mobility and long-term environmental security. It provides a detailed analysis of the policy options available for limiting carbon dioxide emissions, and highlights the limitations of technological measures in solving the problem. Instead, the book's 12-point plan for sustainability shows how a significant reduction in emissions requires the use of all the policy measures available. This valuable contribution to a crucial area of debate covering energy, transport policy and the environment will be essential reading for policy makers, planners and students alike. Peter Huges is deputy editor of Local Transport Today, and has contributed to a wide range of publications including The Daily Telegraph, The Guardian, New Scientist and Energy Policy.
