Fundamental in chemistry, the mole

concept allows access the

submicroscopic world of atoms and

molecules. Understanding and

applying the mole concept makes

possible the analysis of compounds

and their chemical formulas while

studying the properties of matter.

My "go to" procedure for this lab is found in ChemTopic Labs Volume 7: Molar Relationships & Stoichiometry by Flinn. In Flinn's version of the lab, there are detailed instructions to heat the magnesium with the lid on, then open the lid every three minutes, and then heat it some more with the lid at a tilt. All of this manipulation of the crucible lid invariably results in at least one dropped and broken lid each lab period.
