parametrization of the
part of the parabola
with $x \geq 0$. 1.1.2 (i) $\gamma(t)$
 $= (\sec t, \tan t)$ with
 $-\pi/2 < t < \pi/2$ and $\pi/2 < t < 3\pi/2$.

Note that γ is defined
on the union of two
disjoint intervals: this
corresponds to the
fact that the hyperbola
 $y^2 - x^2 = 1$ is in two
pieces, where $y \geq 1$
and where $y \leq -1$.

equations. Coverage

includes Fourier

series, orthogonal

functions, boundary

value problems,

Green's functions,

and transform

methods. This text is

ideal for readers

interested in science,

engineering, and

applied mathematics.

This book presents a

Get Free Instructor

variety of techniques
for solving ordinary
differential equations
analytically and
features a wealth of
examples. Focusing
on the modeling of
real-world
phenomena, it begins
with a basic
introduction to
differential equations,
followed by linear and
nonlinear first order

Get Free Instructor Solution Manual

equations and a detailed treatment of the second order linear equations. After presenting solution methods for the Laplace transform and power series, it lastly presents systems of equations and offers an introduction to the stability theory. To help readers practice

Get Free Instructor

the theory covered,
two types of exercises
are provided: those
that illustrate the
general theory, and
others designed to
expand on the text
material. Detailed
solutions to all the
exercises are
included. The book is
excellently suited for
use as a textbook for
an undergraduate
