This newest addition to the best-selling Microbiology: Laboratory Theory & Application series of manuals provides an excellent value for courses where lab time is at a premium or for smaller enrollment courses where customization is not an option. The Essentials edition is intended for courses populated by nonmajors and allied health students and includes exercises selected to reflect core microbiology laboratory concepts.

Intended to act as a supplement to introductory microbiology laboratory manuals. This full-color atlas can also be used in conjunction with your own custom laboratory manual.

As with the first edition, this second edition of Living in a Microbial World is written for students taking a general microbiology course, or a microbiology-based course for non-science majors. The conversational style and use of practical, everyday examples make the essential concepts of microbiology accessible to a wide audience. While using this approach, the text maintains scientific rigor with clear explanations spanning the breadth of microbiology, including health, evolution, ecology, food production, biotechnology, and industrial processes. Each chapter contains a series of case studies based on microbiology in the news, in history, and in literature. There are questions at the end of each case study and the end of each chapter, as well as an online quiz with help on answering the questions. The text, questions, and cases have been updated to reflect the changing influence of microbiology in the world today, from the microbiome, to new disease outbreaks (Ebola and Zika) and antibiotic resistance, to new biotechnology tools (CRISPR-Cas).

This book is a useful guide for researchers in ecology and earth science interested in the use of accelerator mass spectrometry technology. The development of research in radiocarbon measurements offers an opportunity to address the human impact on global carbon cycling and climate change. Presenting radiocarbon theory, history, applications, and analytical techniques in one volume builds a broad outline of the field of radiocarbon and its emergent role in defining changes in the global carbon cycle and links to climate change. Each chapter presents both classic and cutting-edge studies from different disciplines involving radiocarbon and carbon cycling. The book also includes a chapter on the history and discovery of radiocarbon, and advances in radiocarbon measurement techniques and radiocarbon theory. Understanding human alteration of the global carbon cycle and the link between atmospheric carbon dioxide levels and climate remains one of the foremost environmental problems at the interface of ecology and earth system science. Many people are familiar with the terms 'global warming' and 'climate change', but fewer are able to articulate the science that support these hypotheses. This book addresses general questions such as: what is the link between the carbon cycle and climate change; what is the current evidence for the fate of carbon dioxide added by human activities to the atmosphere, and what has caused past changes in atmospheric carbon dioxide? How can the radiocarbon and stable isotopes of carbon combined with other tools be used for quantifying the human impact on the global carbon cycle?

Praise for the Previous Editions "The author brings in management wisdom from the world outside laboratory animal medicine and veterinary medicine. As a result, there is a rich mixture of the experience of a seasoned professional and the theoretical framework used by schools of management I recommend this book to managers and laboratory animal specialists at any stage of their careers." —Franklin M. Loew, DVM, PhD, DACLAM, JAVMA, Vol. 222, No. 6, 2003 "... This book is a good informational resource for any new manager to the field of laboratory management. The information is presented in a way that will keep your interest and stimulate you to think how it can benefit you and the facility in which you work." —Susan K. Cutter, BS, RVT, RLATG, Purdue University, West Lafayette, Indiana, USA, LAMA Review Written in Jerry Silverman's trademark style, Managing the Laboratory Animal Facility, Third Edition provides the reader with sound management theory and associated management practices that are easy to read, easy to understand, easy to implement, and pertinent to the daily management and leadership of laboratory animal facilities. Maintaining the practical focus of previous editions, this greatly expanded volume presents the critical knowledge needed to help you make efficient and effective use of the key resources that are used every day by vivarium managers – people, time, money, and information. New to the Third Edition Incorporating the latest developments in management theory and application, the edition contains approximately 100 pages of new and expanded material. This more detailed coverage: Discusses lean management concepts and practices and their application to laboratory animal science Adds information on many essential topics, especially in human resources management in its treatment of negotiations, influence, and performance reviews Provides a large number of revisions and updates to Appendix 2 in its presentation of Per diem calculations Includes an extensive list of references for further study of specialized topics
