The goal of Thomas and Maurice's Managerial Economics is to teach students the economic way of thinking about business decision and strategy. This edition continues to develop critical thinking skills and provides students with a logical way of analysing both the routine decisions of managing the daily operations of a business as well as the longer-run strategic plans that seek to manipulate the actions and reactions of rival firms. Managerial Economics is a self-contained textbook that requires no previous training in economics. While maintaining a rigorous style, this book is designed to be one of the most accessible books in managerial economics from which to teach and learn because of its clarity of presentation and strong end of chapter problems. Rather than parading students quickly through every interesting or new topic in microeconomics and industrial organization, this 11th edition instead carefully develops and applies the most useful concepts for business decision making and strategic planning.

In The Doomsday Myth, Charles Maurice and Charles Smithson show that although doom merchants have been predicting imminent collapse from resource shortages as long as civilization has existed, no nation has ever fallen because of the depletion of a resource. They also show that government intervention has not been the solution to these crises. Instead, freely functioning markets with individuals acting in their own self-interest have eliminated shortages, and averted doomsday. The free market theme is the same one used by Adam Smith in The Wealth of Nations in 1776, but the need to restate it for new generations is urgent. The authors concluded that a resource-based doomsday will arrive only if we suspend the functioning of free markets.

Intended primarily for Managerial Economics courses, this text also provides practical content to current and aspiring industry professionals. Economics is a powerful tool that can help managers to manage effectively. In Managerial Economics Jeffrey Perloff and James Brander use real-world issues and examples from actual markets to show future managers how economic principles can be used in business decisions. In text examples and boxed mini-cases use actual data to illustrate how to use basic models. For example, to illustrate rivalry in oligopolistic markets, the authors look at rivalry between

United and American Airlines and between Coke and Pepsi. Mini-case examples include why American Apparel is vertically integrated and why upscale manufacturers limit the number of designer hand-bags a customer is allowed to buy. To help future managers learn to solve new problems, Perloff and Brander repeatedly demonstrate problem-solving through in-text Q&As. Each Q&A poses an important managerial or economic issue and demonstrates how to solve it using a step-by-step approach. Frist published in 1997, this book aims to answer if European 'post-national' citizenship provide a practical opening and a conceptual challenge to cope with the diverse and close-circuiting crises of national European social models? What then might a new sphere of European social inclusion look like? This book also provided the first attempt to go well beyond 'national gridlock'. Old solutions will no longer do. Is new land in sight? With monetary integration almost implemented this is a highly relevant exploration of a central complementary 'common currency' in Europe's future.
