### Pathology Outlines - Skin nonmelanocytic tumor

Non-melanoma skin cancer refers to a group of cancers that slowly develop in the upper layers of the skin. The term non-melanoma distinguishes these more common types of skin cancer from the less common skin cancer known as melanoma, which can be more serious. In the UK, around 147,000 new cases of non-melanoma skin cancer are diagnosed each year.

### Non-melanoma skin cancer - NHS

Benign melanocytic lesions. Created 2008. Learning objectives. Describe and name common benign melanocytic lesions (moles and freckles); Introduction. In the embryo, melanocytes are derived from stem cells in the neural crest that normally migrate to the epidermis, where they are scattered along the basal layer. Melanocytes produce melanin within cytoplasmic packets called melanosomes.

tumors. CONCLUSION: Conjunctival tumors were of melanocytic origin in 53% of cases and nonmelanocytic origin in 47%. Overall, melanocytic tumors, epithelial tumors, and lymphoid tumors accounted for 74% of all cases. These tumors were far more common in Caucasian patients, and epithelial tumors were found more frequently in men.

### Clinical survey of 1643 melanocytic and nonmelanocytic ...

Dermoscopy is useful to distinguish pigmented non-melanocytic lesions from benign and malignant melanocytic lesions. There are specific features that help to distinguish these. Careful observation has resulted in the description of the dermoscopy of many non-pigmented lesions as well, which may be sometimes helpful in diagnosis for an itchy rash.
