Oil seals are functional parts used to seal oil. Composed of synthetic rubber, metal rings and springs, they prevent the leakage of lubricants from gaps within machines and bearings. They also prevent the entry of dust from the outside.

**Oil Seals - NOK**  
Nitrile seal life decreases by a factor of two for every increase in temperature of 57 degrees F. The oil level can be another factor in a lip seal's lifespan if it is too low. In this situation, the seal will eventually become hard and not be able to follow the shaft, resulting in leakage. Cold temperatures can cause seal embrittlement.
