Plant hormones are a group of naturally occurring, organic substances which influence physiological processes at low concentrations. The processes influenced consist mainly of growth, differentiation and development, though other processes, such as stomatal movement, may also be affected.

Plant hormones, known as
plant growth regulators
(PGRs) or phytohormones, are
chemicals that regulate a
plant's growth. According to
a standard animal
definition, hormones are
signal molecules produced at
specific locations, that
occur in very low
concentrations, and cause
altered processes in target
cells at other locations.
