Pacific sea nettles, *Chrysaora fuscescens*. Cnidaria (/ na\u026ad\u026a\u026a\u026a /) is a phylum under kingdom Animalia containing over 11,000 species of aquatic animals found both in freshwater and marine environments, predominantly the latter. Their distinguishing feature is cnidocytes, specialized cells that they use mainly for capturing prey.

Cnidaria - Wikipedia

The Placozoa / p l \u00e6 k \u026a z o \u026a / are a basal form of marine free-living (non-parasitic) multicellular organism. They are the simplest in structure of all animals. Three genera have been found: the classical *Trichoplax adhaerens*, *Hoilungia hongkongensis*, and *Polyplacotoma mediterranea*, where the last appears most basal.The last two have been found only since 2017.

Placozoa - Wikipedia

There are nine major phyla described - Mollusca, Porifera, Cnidaria, Platyhelminthes, Nematoda, Annelida, Arthropoda, Echinodermata, and

Chordata, which of these do you consider to be the most successful? Explain your rationale for measuring success (e.g. total numbers, numbers of different species within the phylum, adaptability, specificity ...

There are nine major phyla described - Mollusca, Porifera ...

Activity: Phylum Cnidaria Introduction Cnidarians are diploblastic (embryo with 2 germ layers). exclusively aquatic, multicellular animals. Most of them live in marine waters, while a few are found in freshwater. Cnidocytes containing stinging nematocysts are distributed throughout its body, especially along the tentacles.

Phylum Porifera and Cnidaria Phylum Cnidarians Thank you 1. The Cnidarians, such as jellyfish are radially symmetrical with tissues 2. Colonial Cnidarians include corals. 3. Are made up of true tissues but do not have true organs 4. They are Carnivores 5. Can reproduce asexually

Compare and contrast the phyla Porifera and Cnidaria. by ...

Habitat: Cnidaria can be found in both fresh water and salt water but most species reside in salt water. Reproductive System: Cnidaria have the ability to reproduce both sexually and asexually. Asexual reproduction takes place by means of budding. For example the jelly fish that we might see at the beach are actually just buds of the real jelly fish which live harnessed to the bottom of the ocean.
