~~HVAC Duct Air Leakage—SMACNA~~

Since 1965, SMACNA has included a procedure for leakage testing of ductwork (HVAC Duct Construction Standard & HVAC Air Duct Leakage Manual). This process like many others developed by SMACNA has evolved over time based on research and feedback from the industry, resulting in changes to both the pass/fail criteria and the application of testing.

~~System Air Leakage Test Standard—Sheet Metal and Air ...~~

SMACNA published the HVAC Air Duct Leakage Test Manual in conjunction with the SMACNA HVAC Duct Construction Standards. Research proved that duct leakage could be well defined as a function of the static pressure and the surface area of the duct. This allowed for the introduction of leakage classes that could be used to calculate and accurately represent the leakage of air from ducts of various sizes and configurations.

If the specifications state that the high-pressure duct is allowed 1% leakage at 1.5 times operating pressure, then the entire high pressure portion of the duct system should be isolated and pressurized to approximately 1.5 times the unit's external static pressure. Sometimes this is not practical, and the duct system must be tested in segments.
