It shows practitioners how to effectively deal with socio-ecological systems' disruptions to their operating environments and play an active role in transforming markets toward a sustainable future. In short, the book demonstrates how to make business sense of sustainability, highlighting new approaches and examples that translate sustainability into strategy and action. The ultimate goal is to provide a path toward a thriving future for both business and society. This book was written for strategy practitioners and decision makers who want to understand why sustainable strategizing is important in today's business world and are seeking actionable business knowledge they can apply in their companies. Current modern companies, which are also the key factors of a global economy, are subject to increasing pressures to conduct their business in an environmentally responsible manner, due to social and environmental problems. Improving long-term environmental performance can bring economic benefits to those companies that are innovative and environmentally sensitive, especially by integrating environmental information into their business strategies. Considering all the changes, sustainability reporting, management, and financial accounting becomes a powerful information tool for executives, managers, and employee teams to gain insights and make better decisions. Along with concepts such as ethical, controlling, auditing, management, and financial accounting, reporting provides value with the decision-making process. All these debates underline the major responsibility of users when configuring accounting and finance models and thereby in modelling business information. Sustainability Reporting, Ethics, and Strategic Management Strategies for Modern Organizations proposes an interdisciplinary perspective and explores various theoretical and practical approaches of ethical standards, management accounting, and their impact in the 21st century on different areas of activity. It contrasts external financial accounting for government regulators and the investment community with internal management accounting for managers to leverage for decision making. In addition, the book examines the role of management accounting and sustainability reporting from other points of view such as ethical standards, corporate social responsibility, creative accounting, green accounting, environmental indicators, e-accounting, KPI, lean accounting, controlling, auditing, reporting, etc., offering a number of new insights into management accounting. It is intended for chief financial officers, financial controllers, business analysts, financial planners, financial analysts, budgeting managers, executives, managers, academicians, researchers, and students.

This book provides an academic introduction to, and presentation and defence of stakeholder theory as a model for the strategic management of businesses and corporations, as well as of public organizations and institutions. The concept of the stakeholder is generally applied to parties that affect or are affected by the activities of private or public organizations. Distinct from shareholders, stakeholders are those individuals, entities or communities that have a connection with the activities of a corporation, a firm or an organization. The notion of the stakeholder is intimately linked to a conception of the business firm as an entity founded on negotiated governance, in which the maximization of value for the shareholder is not the ultimate criterion. In this model, issues and interests that are not directly associated with shareholders and investors, but which go beyond capital to encompass the concerns of civil society, are considered to be of central importance. This book provides a broad overview of stakeholder theory, presenting it as an ethical approach to strategic management that is both pragmatic and applicable to developing democratic practices within corporations, while at the same time suggesting ways in which elements of a social contract can be elaborated within the context of globalization.

"The misconduct of various companies directs both practitioners and academics towards the necessity for a requisitely holistic approach to governance and management. As such, there is a current focus for researchers and practitioners on contemporary solutions for governance and management in this sense. Such efforts have led to the development of integral management and governance, meaning that the process of management and governance in a certain company has to be integrated and consistent with culture, credibility, entrepreneurial spirit, ecology, ethics, innovation, and social responsibility. Consequently, in the process of a company's management and governance, the key stakeholders have to achieve the (corporate) integrity of their company's functioning. The integrity of such a company's functioning is currently treated as the precondition for a company's success in the long run. This volume explores such issues in the broader context of the MER Model of Integral Management and Governance, which is based on the multi-layered integration of governance and management with an enterprise and its environment, considering the fundamental aspirations for the enterprise's existence and, thus, its quantitative, as well as qualitative, changes.

This book responds to key issues in strategic management control by studying the interplay between ethics, social and environmental performance and governance.
